Lab 2: Advance HTML and CSS

Date: Oct 18th, 2025

Output:

Survey

If you have a moment, we'd appreciate it if you would fill out this survey.

Your information:

First Name:

Last Name:

Email:

Date of Birth:

How did you hear about us?

☐ Search engine ☐ Word of mouth ☐ Social Media ☐ Other

Would you like to receive announcements about new CDs and special offers?

☐ YES, I'd like that.

☐ YES, please send me email announcements.

Please contact me by:

San Joaquin Valley Town Hall

Bringing cutting-edge speakers to the valley

This season's guest speakers

- October: **David Brancaccio**
- November: **Andrew Ross Sorkin**
- January: **Amy Chua**
- February: **Scott Sampson**
- March: **Carlos Eire**
- April: **Ronan Tynan**

Looking for a unique gift?

Town Hall has the answer. For only \$100, you can get a book of tickets for all of the remaining speakers. And the bargain includes a second book of tickets for a companion.

Or, for \$50, you can give yourself the gift of our speakers, and still get an extra ticket for a companion, but for just one of the events.

See you at the next show!

Contact us by phone at (559) 555-1212 for ticket information.

Lecture notes

Event change for November

SJV Town Hall is pleased to announce the addition of award-winning author Andrew Ross Sorkin. The appearance of previously scheduled speaker, Greg Mortenson, has been postponed.

Lecture day, time, and location

All one-hour lectures are on the second Wednesday of the month beginning at 10:30 a.m. at William Saroyan Theatre, 700 M Street, Fresno, CA.

Checklist:

Exercise 2

WHAT:

This lab involves creating a survey form using HTML and CSS that includes text fields, email, date pickers, radio buttons, checkboxes, and a dropdown menu.

WHEN:

It is applied when gathering user feedback, registration details, or any input information on a website.

WHY:

The goal is to design a well-organized and visually clear layout while learning how to structure forms, group input elements properly, and apply styling for readability and neat presentation.

HOW:

A `<form>` tag is used to hold all labeled input elements. Radio buttons are grouped by the same name to allow a single choice, checkboxes let users select multiple options, and a `<select>` element provides dropdown choices. CSS manages spacing, colors, and alignment to enhance the form's appearance.

```
<h2>Survey</h2>
<p>If you have a moment, we'd appreciate it if you would fill out this survey.</p>

<p class="section-title">Your information:</p>
<label>First Name: <input type="text" name="firstName" required /></label>
<label>Last Name: <input type="text" name="lastName" required /></label>
<label>Email: <input type="email" name="email" required /></label>
<label>Date of Birth: <input type="date" name="dob" required /></label>

<p class="section-title">How did you hear about us?</p>
<div class="radio-group">
  <label><input type="radio" name="source" value="search" /> Search engine</label>
  <label><input type="radio" name="source" value="word" /> Word of mouth</label>
  <label><input type="radio" name="source" value="social" /> Social Media</label>
  <label><input type="radio" name="source" value="other" /> Other</label>
</div>

<p class="section-title">Would you like to receive announcements about new CDs and special offers?</p>
<label><input type="checkbox" name="announce" value="yes1" /> YES, I'd like that.</label>
<label><input type="checkbox" name="announce" value="yes2" /> YES, please send me email announcements.</label>

<label>Please contact me by:
  <select name="contact">
    <option value="both">Email or postal mail</option>
    <option value="email">Email only</option>
    <option value="post">Postal mail only</option>
  </select>
</label>

<input type="submit" value="Submit" />
</form>
</body>
</html>
```

Exercise 3:

WHEN:

It is applied when designing webpages that require clearly organized sections — such as blogs, dashboards, or news portals.

WHY:

CSS Grid provides precise control over the placement and spacing of elements in rows and columns, eliminating the need for floats or complex positioning techniques.

HOW:

A parent `<div>` (container) is assigned `display: grid`, and grid properties like `grid-template-columns`, `grid-template-rows`, and `gap` are used to define the structure. Each section (header, main content, sidebars, and footer) is placed into the grid using `grid-area` or specific row/column settings.

```
.container {  
  display: grid;  
  grid-template-areas:  
    "header header header"  
    "sidebarA main sidebarB"  
    "footer footer footer";  
}
```

-Each section (like `<header>`, `.main`, `.sidebarA`, `.sidebarB`, `<footer>`) is assigned its grid area using

```
header {  
  grid-area: header;  
  border-bottom: 2px solid #f7c58a;  
  padding: 10px 20px;  
  font-weight: bold;  
}
```

Exercise 4:

WHAT:

This lab creates a two-column webpage for San Joaquin Valley Town Hall using HTML5 and CSS Flexbox. The layout features a header with a logo and title, a main section with content and a sidebar, and a footer at the bottom.

WHEN:

It is applied when building clean, organized webpages that display main content alongside related information, such as news updates or announcements.

WHY:

Flexbox offers a simple and responsive method to position elements horizontally without relying on floats or complex manual alignment. It ensures a consistent layout across different screen sizes.

HOW:

- The `<main>` container uses `display: flex`; to divide the page into two columns: `.content` and `.sidebar`.
- The header also uses Flexbox to align the logo next to the site title.
- CSS styling (colors like `#f6d79b` and `#b5651d`, along with borders) is applied to match the provided sample design.

```
.main {  
  display: flex;  
  gap: 20px;  
  padding: 20px;  
}
```
